TARVISIA

Our bottling system **TARVISIA** changes the concept of the filling using the vacuum to fill non-carbonated liquids. This **PATENTED** method, is unique and innovatitve as it uses the vacuum constant control in all the filling steps. This nnovation of **TARVISIA** uses the low vacuum values under the category called **low vacuum** which is not affecting or altering the products in contact. The advantage is that removing the air contained in the bottle and expelling it outside actually it creates a **pre evacuation** minimizing the contact of the liquid with the air and consequently the oxygenation of the bottled product.

VELOX

The main feature of **VELOX** machine is the absence of the bottle lifting cylinders, beacuse the machine works on a rotating plane on which the bottles and simultaneously the filling valves descend entering the bottle neck, thereby decreasing the maintenance and spare parts.
The filling valve "tube in tube" type it's completely in stainless steel **AISI 316** and it is easy to disassemble for the single coupling point and easily maintained. Through these systems, the **VELOX** machine allows to work both with PET bottles and glass bottles using gravity in the filling process.
The **VELOX** machine is particularly suitable for **HOT FILLING** mode in PET bottle and Glass bottle.
VELOX T is the new electronic bottling system for still liquids. The new electronic valve without gaskets allows to obtain exceptional results in the bottling of products which do not need the oxygenation resulting from the bottling steps. The absence of the product tank makes it extremely suitable in the filling processes of the delicate products which must pass quickly from the storage tanks to the bottle.

FELIPE

FELIPE is the Filling machine with electronically control filling system and can be supplied in 2 versions depending on the product to be filled.

FELIPE MAG is the electronic volumetric filling system for every type of liquids with electromagnetic conductivity and guarantees a high precision in the volume for any container from mignon to large sizes and for any material: glass, PE, PET, cans etc.
The flowmeters being free of magnetic gaskets or internal moving parts allow thorough cleaning and sterilization in minimal time.
The new system **FELIPE** replaces the old volumetric filling systems with the pneumatic pistons or mechanical ones.

FELIPE MASS, the older version of the magnetic machine, is the mass system maintaining the same technical characteristics of the magnetic system but increasing the field of application working with the liquids free of electromagnetic conductivity also. The measuring principle operates independently of temperature, pressure, viscosity, conductivity and flow profile. This allows to check the mass of the product and therefore the weight guaranteeing a high precision independently of the external factors.
The **FELIPE MASS** new system replaces the old filling weight type often complicated and imprecise system.

ISOBARIC

ISO PET - ISO GLASS – ISO CAN - Mechanical and Electropneumatic machine type for filling PET bottles, glass bottles and cans.
The filling of any kind of carbonated liquids, complete sanitizing, quickly bottle format change, low maintenance, filling system for every needs, are the main characteristics of our Isobaric machine.
Due to ***the special valve*** of the filler and the **ISO** regulation system is particularly suitable to fill **carbonated products in the presence of foam**.
It is used for sparkling water, wines, beer, soft drinks, ciders and energy drinks.
The machine can be in the version of the FREE STANDING, MULTIBLOCK or CORNERBLOK with the capping turrets with up to 4 types of closure and it can be manufactured in the versions both MECHANICAL and ELECTROPNEUMATIC.

ISOBARIC

ISO PET

ISO PET

Mechanical and Electropneumatic machine type for filling PET bottles. The standard container handling is performed by neck support and pocket starwheels. The ISO PET machine is conceived to fill carbonated water and drinks, beer as well as still water and still products with preservatives.

ISOBARIC

ISO GLASS

ISO GLASS

Mechanical and Electropneumatic machine for filling GLASS bottles. The container handling is performed by bottom support, transfer starwheels as well as body guides. The ISO GLASS machine is conceived to fill carbonated water and drinks, beer as well as still water and still products with preservatives.

ISO CAN

ISO CAN

Mechanical and Electropneumatic machine type for filling ALUMINUM CAN FROM 100 TO 1.000 ml.

The container handling is performed by bottom support, transfer starwheels as well as body guides. The ISO CAN machine is conceived to fill carbonated water and drinks, beer as well as still water and still products with preservatives.

LABORATORY MACHINES

Special machines manufactured on request and designed laboratories to control the proper result in the product production and for the production of small volumes.
The machines can be supplied with the different Rinsers and Cappers according to the requests. These machines are also used for the production of small series, and for large formats for wine (up to 20 liters). It 'possible to realize machines for glass bottles, PET and cans

CUSTOMER SERVICE WORLDWIDE:

From the purchase and during the entire lifecycle of our machines, we listen to our customers and try to satisfy their needs providing the correct techcnial and technological solutions, and follow up. That's why, choosing **DIPRAN** you get the most reliable assistance for the most reliable machines.

SERVICE

Our service department is composed with the dedicated staff members, who control and coordinate every phase of the process in order to have a general view of the problems and the related solutions.

SPARE PARTS

Our efficient and flexible department coordinates all spare parts requests and shipment worldwide.

TRAINING

DIPRAN puts its know-how at the disposal of our customers, offering training services aimed at training operators and technicians on the machines they use. We can train staff at our headquarters or at DIPRAN. With this innovative service, DIPRAN intends to demonstrate its willingness to assist customers step by step even after the machine has been sold, offering assistance to staff and machines.
